

Weekly Report

Yuxin Ma

2017.04.10 - 2017.04.16

This week I mainly prepared for the presentation in CVM conference.

Projects

Spark Visualization

The Spark system on the computing cluster is now ready to use. The previous performance monitoring systems were almost restored where the logs on each slave node could not be transferred to the master node.

Plan for the Next Week

For the paper of visualizing Spark:

- Find a new way to write the logs separately on each slave node as soon as possible.
- Visual design.
